

## Cardiac Care Quality Indicators Report

# St. Boniface among best in Canada for heart surgery outcomes: The Canadian Institute for Health Information

(From CBC News Manitoba) The Canadian Institute for Health Information looked at patient outcomes and re-admission rates after the most common kinds of heart surgery in its survey of hospitals in nine Canadian provinces. It released **the results of that survey** on Tuesday.

St. Boniface Hospital's cardiac sciences program had some of the highest scores in all markers, including low rates of patient mortality, low rates of re-admission after surgery, and high patient volumes for angioplasty, or cardiac catheterization surgeries.
